SZapp for Iphones - Version 3.0.9

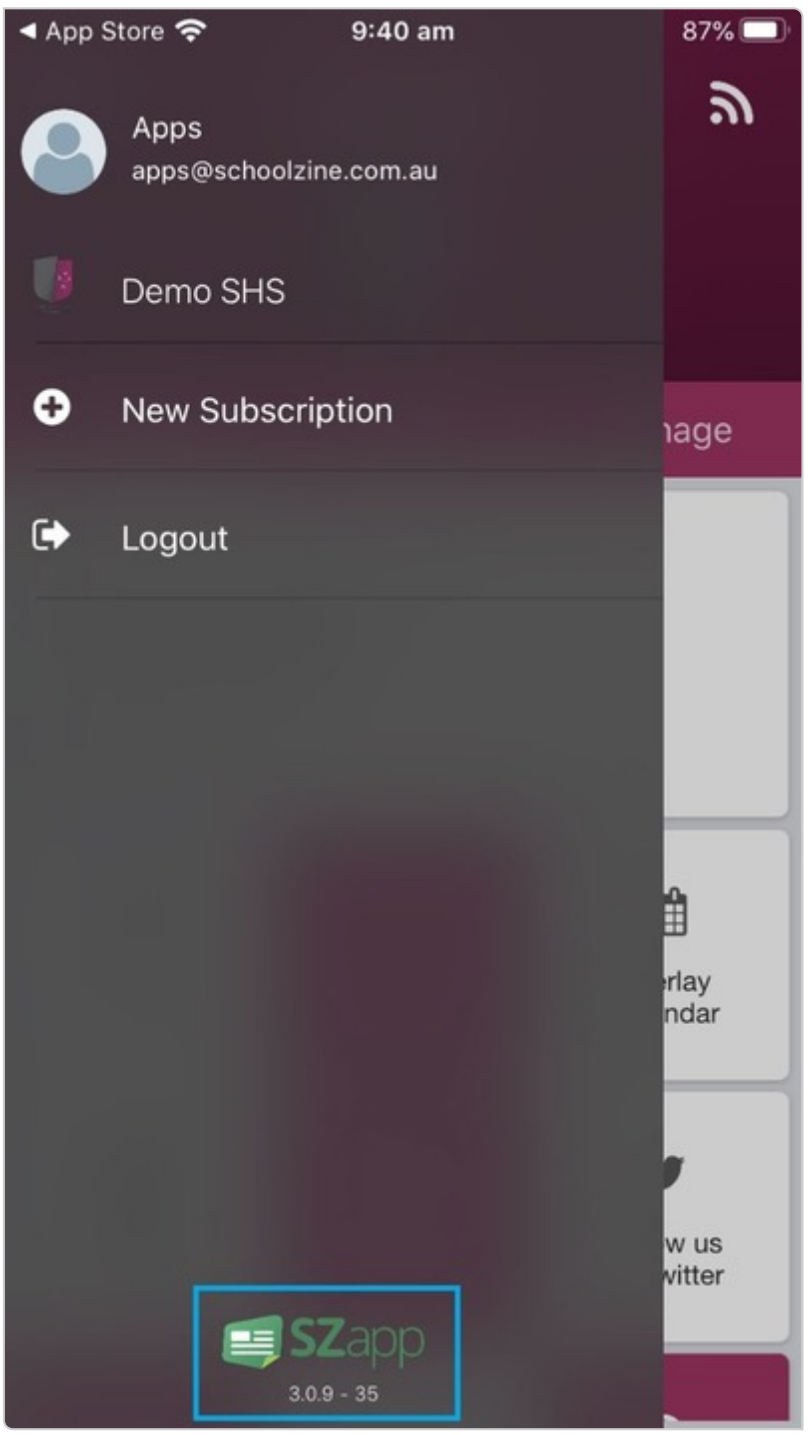
SZapp MADE BY SCHOOLZINE

An update for SZapp has been released to accomodate for iPhones which have recently updated their software to iOS 13 and above. iOS Version 13+ was causing some devices to intermittently receive push notifications.

SZapp version 3.0.9 is available from the App Store now and we advise all iPhone users to install this version to ensure notifications are received correctly. Users with automatic updates enabled on their device will recieve this update automatically.

You can check which version of SZapp you have installed by completing the following:

1. Open SZapp
2. Click the burger menu (white lines) at the top left of SZapp
3. View the Version at the bottom of the menu



Other small items included in this update are:

- First Name and Last Name fields are now mandatory on sign-up
- Disabled 'auto-select' on sign-up as this would hide the login button beneath the keyboard.
